

# STARSEAL. SEALING SLEEVES FOR PERFORATED FLASKS

**VACUUM CASTING** systems have imposed perforated flasks

If the method used to **seal the holes** in the flasks while investment in being poured, is not suitable, more **time** will be required, and what is more important:

Can produce **faults in some pieces or in all pieces in the flask** due to sealing failure

STARSEAL seals the holes, **quickly, safely, and with a comparatively low cost.**

A number of units Starseal equal to or double of the capacity of your Vacuum Mixer, is recommended

WE WILL QUOTE YOU THE BEST PRICE FOR THE NUMBER OF UNITS THAT WOULD NEED

Please let us know the size of your flasks, and if they are with or without flange.
