

GRINDING**enerGy****New generation****POLISHING**

EN-34 (2nd GOLD STEP) is a different machine, uses different compound and makes different work than GP (1st GOLD STEP). GP gives better results in the outsides.

enerGy (2nd GOLD STEP) REACHES RECESSED AREAS, INSIDES, FILIGREE AND JEWELS WITH STONES CAST IN PLACE.

Does not affect stones, enamelling, and non conductive surfaces.

enerGy makes now in a few minutes the MOST DIFFICULT WORK in finishing process, impossible for other automatic or mass processes, and very difficult and costly to do by hand. Easy. Automatic.

enerGy makes your design much more free, since does not round prongs or angles and follows most accurately the contour of your design.

EN-34 is designed to be AFFORDABLE for all artisans, but at the same time, it is scalable to meet all production requirements.

enerGy can process practically all pieces normal in jewellery, even colliers or chains, enabling to process very heavy and very light pieces, at the same time.

enerGy will:

INCREASE your production,
INCREASE your quality
DECREASE your cost
DECREASE your metal loss

RECOVERY THE METAL REMOVED - All gold removed will stick to the cathode (organic) making so, very easy to melt and recover.
